
Note:
This map approximates land cover across the City of Redmond in 1850, prior to any significant development. Mature Douglas fir forest predominated. The Sammamish River Vallley and lower Bear Creek Valley were occupied by a mix of wooded wetland and pasture. For stormwater modeling purposes, these have been combined into a single "pasture" category.

Redmond Natural Resources staff developed this map in 2004, based on the earliest availale field mapping (USGLO 1870) and first local land classification/forest survey (USDI), completed in 1897. The Sammamish River is show in its present configuration
